EMERGENCY RELIEF BED

The Emergency Relief Bed (EFB-1051) is designed for emergency medical response where mobility and quick setup are priority. This domestically-built, robust bed is constructed from steel finished with an impermeable coating.

The Emergency Relief Bed (EFB-1051) is designed with an adjustable head that can be tilted to angles of 18°, 30°, 40°, 51°, 62°, 73° which are measured from the bed lying flat. It can accommodate a maximum capacity of 450 LBS. Dimensions include a length of 81", a width of 37", and an ideal height of 24" (*Measured from the foot to the top of the flat mattress*). Fastbeds have a unique folding design which allows for easy stacking and storage.

All necessary hardware for bed assembly is provided to ensure quick setup. This includes an IV stand which can be fitted on either side of the head and caster wheels. All fastbed designs include a quick release bar that disengages the sawtooth rack for an immediate release.

The EFB-1051 has customizable options to fit your specific needs. These include removable side rails that can double as a transport bar, removable IV stand, and a firm 6" CPSC - Cal -1633 Compliant Mattress.

DIMENSIONS W×H×L

37" × 24" × 81"

1

Caster Wheels

2 Locking, 2 Free

2

Head

Tilts from 0°-73°

3
